

## 3 year Post doctoral position

**A Postdoctoral research fellow position is available in the Bengoechea lab (Queen's University Belfast)** for a highly motivated individual with a Ph.D. in Microbiology, Biochemistry, or Immunology to carry out frontier infection biology research.

Major efforts are focused on understanding new virulence mechanisms of the human pathogen *Klebsiella pneumoniae* to attenuate innate immune responses. Project will focus on disentangling a new signalling pathway targeted by *Klebsiella* to prevent NF- $\kappa$ B activation while affecting the mitochondria.

Highly motivated candidates with demonstrable skills in molecular microbiology, a strong background in innate immune signalling, and/or expertise in cellular microbiology are encouraged to apply.

Please send a CV, a brief description of research experience, and names of 2-3 references.
